DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-5, 44-48, 87, and 94, drawn to a method and system for linking a physical address to an electronic account of a user using a matching engine, classified in class 705, subclass 1.
 - II. Claims 6-10, 49-53, 88, and 95, drawn to a method and system for storing a determining a delivery point identification key in an electronic account, classified in class 707, subclass 1.
 - III. Claims 11-16, 54-59, 89, 90, 96, and 97, drawn to a method and system for creating a static address database from a master address database, classified in class 707, subclass 1.
 - IV. Claims 17-20, 60-63, 91, and 98, drawn to a method and system for sending an address from an electronic account to obtain a standardized physical address, classified in class 707, subclass 1.
 - V. Claim 21-42, 64-85, 92, 93, 99, and 100, drawn to a method and system for sending an electronic message to an electronic address of a user, classified in class 705, subclass 1.

The inventions are distinct, each from the other because of the following reasons:

2. Invention I is related to Inventions II-V as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not

Art Unit: 3628

overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination I has separate utility such as linking a physical address to an electronic account.

Subcombination II has separate utility such as storing a delivery point identification key.

Subcombination III has separate utility such as creating a static address database.

Subcombination IV has separate utility such as sending an address from an electronic account to obtain a standardized physical address. Subcombination V has separate utility such as sending an electronic message to an electronic account. See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

3. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.
